Homework Menu – Autumn 1

Choose at least 1 item from the homework menu to be completed before the end of our first term. You can bring the work into school or send in photos on class dojo.

In the last week, photos will be collated and presented to show off your child's hard work. Dojos will also be awarded for efforts.

Create a piece of art based on a renewable energy source (wind turbine, solar panel farm, water wheel). This could be a drawing, painting or 3D model.

Find out where our local power stations are. Create a map and label them.

Create a short comic strip in which two children get to know each other in French.

Can the past power our future?

Create a mind map of devices that need electricity to work.

Create a poster to advertise safety around electricity in the home.

Design your own renewable energy power unit. For example: your own windmill, solar panel unit or water wheel. Annotate it to explain how it works.

Write a speech to explain why it is important to use renewable electricity.
